

PRECO Electronics
Product Verification Test Engineer
Boise, Idaho

Overview:

This position will provide technical support for various aspects of performance testing during the design and development of products as part of the product development team. The scope will include developing and executing test plans to validate operation and performance of products both during the development phase and throughout the lifecycle of the product. The products will be sensors and systems intended for application on commercial vehicles and testing will be done in lab settings and on vehicle settings in a variety of testing environments.

Primary Responsibility:

- Writing test procedures and developing test plans
- Coordination of field testing programs
- Excellent interpersonal communication skills both in written and verbal
- Experience as part of product development team in a technology based company environment
- Competitive product evaluations and reports
- Background in a variety of computer based data acquisition systems
- Computer programming skills would be beneficial with a background in MATLAB and C/C++/C# a plus.
- Possessing a CDL is a plus
- Ability to work and communicate well in a small team environment is a must.

Other Characteristics of the position:

- Team Player
- Good communication skills
- Seeks and participates in development opportunities above and beyond required training
- Suggests areas for improvement in internal processes along with possible solutions
- Works cross functionally
- May travel up to 10-20% as needed

Education/Experience:

Bachelors Degree in a technology field and 3-5 years of experience in a product development environment.
